## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1, 4, 5 and 6-11, drawn to an optical apparatus utilizing a variable-optical property element with ray-deflection function, a driving circuit to drive said element and an arithmetical circuit, classified in class 359, subclass 197.
  - II. Claims 2, 3 and 12-32, drawn to an optical apparatus having an electronic zoom function, an image sensor and an image processor, classified in class 396, subclass 72.

### ***How Inventions are Related***

2. Inventions I and II are directed to related products. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed have a materially different mode of operation, a different design and a different effect, wherein the inventions are mutually exclusive and are not obvious variants of each other.

The Invention of Group I has a different design, wherein there is an arithmetical circuit which presumably controls the driving circuit of the variable optical property element, which the Invention of Group II does not. Further, the Invention of Group I has a materially different mode of operation, in that the ray deflection function of the variable optical property element corresponds to a change in the object area and the image to be used. The aberration of the optical system is compensated for, relating to the change in the object area, which provides a different effect for Invention I. Whereas Invention II, has the materially different mode of operation of utilizing an electronic zoom function, which corresponds to the use of the image sensor and image processor, thereby providing a different design than Invention I. The different effect of Invention II compared to Invention I is linked to the electronic zoom function, i.e. the image processor magnifies the image, which Invention I does not have.

***Why the Restriction is Proper***

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Also, because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required

because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

### ***Joint Inventors***

5. The Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

### ***Response to Arguments***

6. Applicant's arguments with respect to claims 1-32 have been considered but are presently moot in view of the restriction requirement applied to the current claims. The restriction requirement resulted from the amendments made to the claims, ensuing from the Applicants' response filed on 7-3-06.
